

Data Cleaning Change Log

Project 1 — Data Cleaning & Preparation | DecodeLabs Industrial Training Kit

Analyst:	Amira Hassan
Dataset:	Dataset_for_Data_Analytics.xlsx (1,200 records, 14 source fields)
Tool Used:	Microsoft Excel — Power Query & native formatting
Date Prepared:	July 4, 2026

Purpose

This log documents every transformation applied to the raw dataset during the cleaning and preparation phase, along with the reasoning behind each change and its measurable impact. It exists so any stakeholder can see what was changed and why, without re-deriving the cleaning process from scratch.

Change Log

Change ID	Description	Impact	Status
CR001	Identified and resolved missing values in the CouponCode field.	309 of 1,200 records (25.75%) had blank CouponCode values. Replaced nulls with the explicit label "No CouponCode" so missing-coupon orders are distinguishable from a data-entry gap. 0 nulls remain across all 14 fields.	Resolved
CR002	Audited the dataset for duplicate unique identifiers and duplicate records.	Checked OrderID, TrackingNumber, and full-row duplication across all 1,200 records. Result: 0 duplicate OrderIDs, 0 duplicate TrackingNumbers, 0 duplicate rows. Meets the 0% error-rate requirement for unique identifiers.	Verified
CR003	Standardized numeric precision on UnitPrice and TotalPrice.	Applied a consistent currency format (\$#,###0.00) to both columns so every value displays at exactly 2 decimal places. Cross-checked that TotalPrice = Quantity × UnitPrice on all 1,200 rows with 0 mismatches.	Resolved
CR004	Corrected Date column format to ISO 8601 (YYYY-MM-DD).	Original format displayed as mm-dd-yy, which is ambiguous across locales. Reformatted all 1,200 date values to YYYY-MM-DD. Confirmed no invalid or out-of-range dates (range: 2023-01-01 to 2025-06-30). Meets the 0% error-rate requirement for date formatting.	Resolved
CR005	Added a derived "Month Year" helper column.	Created for easier monthly grouping and pivoting in downstream dashboard work. Non-destructive addition; does not alter or replace the ISO-formatted Date column.	Completed

Verification Summary

Check	Threshold	Result
Duplicate unique identifiers	0% required	0% — Passed
Incorrectly formatted dates	0% required	0% — Passed
Missing / null values	None remaining	0 nulls — Passed
Numeric precision (2 decimals)	Consistent display	Applied — Passed
